Study Time Vs Marks Analysis

1. Introduction

This project focuses on analyzing the relationship between study time and marks obtained by students.

2. Problem Statement

To understand whether increasing study hours improves student performance.

3. Importance

Helps students plan their study time effectively.

4. Approach

1) Data collection

2) Data analysis using NumPy

3) Visualization using Matplotlib

5. Tools Used

1) Python

2) NumPy

3) Matplotlib

6. Implementation

Scatter plot and best fit line are used to show relationship between study hours and marks.

7. Challenges

1) Understanding data relation

2) Plotting graph correctly

8. Results

Positive relationship observed between study time and marks.

9. Conclusion

More study time generally leads to better marks.

10. Learnings

1) Data analysis

2) Visualization techniques

3) Python coding .
